Total cholesterol / HDL ratio	**5.7**	**H**		< 4.5

Comment

LDL calculated by the Friedewald equation (valid, triglycerides < 4.5 mmol/L). Atherogenic profile: raised LDL and triglycerides with low HDL. LDL is above the target of < 2.6 mmol/L for a patient with diabetes (Malaysian CPG Management of Dyslipidaemia). Consider lifestyle measures and statin therapy.

H = above reference range L = below reference range A = abnormal * = outside treatment target
